

14/11/2014

## **Preparatory Studies for Product Group in the Ecodesign Working Plan 2012-2014: Lot 8- Power Cables**

**3rd stakeholder meeting**

**Paul Van Tichelen**

**Brussels, DG Enterprise**

**13 November 2014**

# Agenda

- » 10:00-10:10 Welcome
- » 10:10-10:20 Short presentation of participants
- » 10:20-11:20 Tasks 1-3 in a nutshell, incl. latest enquiry input
- » 11:20-12:30 Task 4-6, based on updated input incl. improvement options and sensitivity analysis
- » 12:30-13:30 Break & lunch
- » 13:30-14:00 Draft Task 7 on policy options including discussion
- » 14:00-14:20 Draft Task 7 on need for updated and/or new standards, including discussion
- » 14:20-14:50 Draft Task 7 on 2025 scenarios
- » 14:50-15:20 Draft Task 7 on impact including discussion and stakeholders position input
- » 15:20-15:30 Any other business
- » 15:30-15:40 Planning stakeholder feedback and finalization

# EC policy officer & VITO Study Team

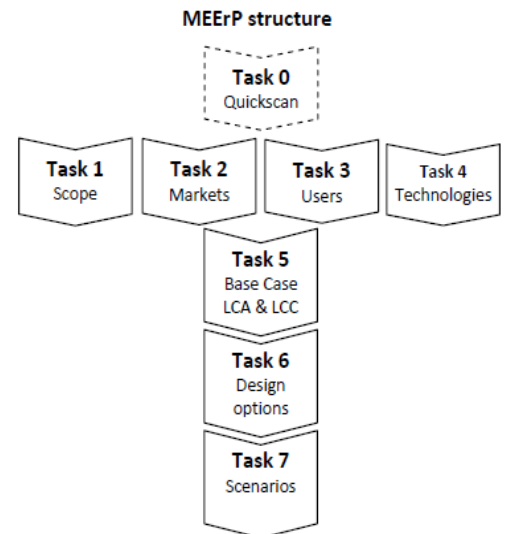

- » EC policy officer: Cesar Santos
- » VITO Preparatory Study Team:
  - » Arnoud Lust: Contract Manager: Arnoud Lust (FC ENTR/29/PP/FC Lot 2) and FC DG ENER Lot 1
  - » Main author power cables study&coordinator: Paul Van Tichelen
  - » Co-authors:
    - » Dominic Ectors (market and use data, ..)
    - » Marcel Stevens (technical standards, ..)
    - » Wai Chung Lam (LCA, MEErP and scenarios, ..)
  - » Administrative contacts:
    - » Magalie Wellens +32 14 33 58 04
    - » Katrien Bultynck +32 14 33 59 96
  - » Website: Karel Styns (webmaster).

# Introduction ErP Directive

- » Background is the Ecodesign Directive 2009/125/EC:
  - » Framework Directive
  - » binding requirements through 'Implementing Measures' (EC Regulation ..)
  - » For products but it is possible to introduce information requirements for components and sub-assemblies
  - » Product groups are first identified in a Working Plan, such as power cables in the 2<sup>nd</sup> working plan year 2012-2014
  - » **A preparatory study provides the necessary information to prepare for the next phases in the policy process, a.o.: impact assessment, the consultation forum, ..)**
  - » Approach of preparatory study is well defined in the Methodology for the Ecodesign of Energy-related Products (MEErP)
  - » Further info: [http://ec.europa.eu/enterprise/policies/sustainable-business/ecodesign/index\\_en.htm](http://ec.europa.eu/enterprise/policies/sustainable-business/ecodesign/index_en.htm)

# MEErP in a nutshell

- » Tasks in MEErP (chapters in final report):
- » Task 1 - Scope (definitions, standards and legislation, first screening);
- » Task 2 – Markets (volumes and prices);
- » Task 3 – Users (product demand side);
- » Task 4 - Technologies (product supply side, includes both BAT and BNAT);
- » Task 5 – Environment & Economics (Base case LCA & LCC);
- » Task 6 – Design options;
- » Task 7 – Scenarios (Policy, scenario, impact and sensitivity);
- » Tasks 1 to 4 can be performed in parallel

# Planning

- » 28 Jun 2013 ■ Project kick-off meeting with EC
- » July 2013 ■ Launch website [www.erp4cables.net](http://www.erp4cables.net)
- » Aug 2013 ■ Launch first series of enquiries to registered stakeholders
- » 5 dec 2013 ■ 1st stakeholder meeting on Draft Task 1-3
- » 3 June 2014 ■ 2nd stakeholder meeting on Draft Task 1-5
- » **13 Nov 2014 ■ 3rd stakeholder meeting on Draft Task 1-7**
- » End Feb 2015 ■ Publication Final Report Task 1-7

14/11/2014

## Preparatory Studies for Product Group in the Ecodesign Working Plan 2012-2014: Lot 8-Power Cables

**Stakeholder meeting: Task 1**

**Paul Van Tichelen**

**Brussels, DG Enterprise**

**3<sup>rd</sup> of June 2014**

# Task 1: Content

- » “Product scope” of the study
- » Product categories based on
  - » Prodcom
  - » EN- or ISO-standards
  - » Other product-specific categories
- » Definitions & Terminolgy
- » Primary & secondary product performance parameters
- » Product Standards & Legislation
  - » EU level
  - » Member state level
- » First screening

# Task 1: Product scope

- » **SCOPE: 'losses in installed power cables in electric circuits in buildings after the meter' taking into account the electrical installation as a system.**

Out of the scope:

- » Losses in circuit breakers;
- » Losses or inefficiency in the loads connected to the circuit;
- » Losses due to poor connections ;
- » Utility cables for transmission (HV) and distribution (MV,LV) of electrical energy;
- » Power cables for Nuclear power;
- » Power cables for hazardous locations (in ATEX zones);
- » Cables used for power plants such as PV, Wind, ....;
- » Outdoor cables: Cables used in process installations (e.g. chemical and petrochemical plants), railway cables,..;
- » Cables for mobile applications: (electric) cars, ships, metro, ...
- » Busbar Trunking systems;

# Task 1: Product performance parameter

- » Primary product(circuit) performance parameter or “Functional unit”:
  - » **Cable: “Current-Carrying capacity” of the cable/conductor [Amperes]**
  - » **Circuit: >  $I_n$ : is rated current for the circuit and is determined by the protective device (safety fuses or circuit breakers) of the circuit;**
- » Secondary:
  - » CSA, LF, Kf,  $\cos \theta$ , L, ..

# Task 1: Measurement & test standards

- » Conductors & cables
  - » EN13601 & -13602: Copper and copper alloys
  - » **EN 60228**: Conductors of insulated cables
    - » Class1,2,5,6; Links '**Nominal CSA with Rdc max**', ...
  - » EN 50525-1: Low voltage energy cables
  - » EN 50395: Electrical test methods for low voltage energy cables

# Task 1: Measurement & test standards

- » Electrical installation:
  - » **(IEC)HD 60364-5-52: LV electrical installations – ... wiring systems**
    - » Correction factors, methods of installation, **dV max**, ....
  - » IEC 60287-1-1: Calculation of current rating & losses -100% load factor
  - » **IEC 60287-3-2: Calculation of current rating – Economic optimization single cable segment – not for distributed loads**
  - » IEC 60364-6: Low Voltage electrical installations – verification
  - » **IEC 60364-8-1 / FprHD 60364-8-1: 2013: Low voltage electrical installation - Part 8-1: Energy efficiency – DRAFT version:**
    - » Reduction of energy losses in wiring:
      - » Reducing the voltage drop. Reference to IEC 60364-5-52;
      - » Increasing the cross sectional area. Reference to IEC 60287-3-2;
      - » Power factor correction to improve the power factor of the load circuit;
      - » Reduction of harmonic currents at the load level.
    - » **Qualitative but not quantitative ?**

# Task 1: First screening

- » **Note: these values are updated in later chapters!**
- » Focus in tasks 3-6 on service and industry sector

14/11/2014

## Preparatory Studies for Product Group in the Ecodesign Working Plan 2012-2014: Lot 8-Power Cables

**Stakeholder meeting: Task 2**

**Paul Van Tichelen**

**Brussels, DG Enterprise**

**3<sup>rd</sup> of June 2014**

# Content

- » **2.1 Generic economic data**
- » **2.2 Market and stock data**
  - » **2.2.1 Sales data**
  - » **2.2.2 Stock data**
- » **2.3 Market trends**
- » **2.4 Consumer expenditure base data**
- » **2.5 Recommendations**

# Market and stock data: summary

| Sector                  | Product life | Service life | Vacancy | Stock growth rate | Demolition rate | Replace-ment sales rate | New sales rate | Total sales rate | Stock (Reference year: 2010) |      |
|-------------------------|--------------|--------------|---------|-------------------|-----------------|-------------------------|----------------|------------------|------------------------------|------|
| Unit                    | Year         | Year         | %       | % p.a.            | % p.a.          | % p.a.                  | % p.a.         | % p.a.           | kTon Cu                      | %    |
| Residential sector      | 64.00        | 60.80        | 5%      | 0.90%             | 0.10%           | 1.18%                   | 0.90%          | 2.08%            | 5241                         | 43%  |
| Services sector         | 25.00        | 23.75        | 5%      | 1.90%             | 0.20%           | 3.20%                   | 1.90%          | 5.10%            | 3250                         | 26%  |
| Industry sector         | 25.00        | 23.75        | 5%      | 2.90%             | 0.20%           | 2.80%                   | 2.90%          | 5.70%            | 3825                         | 31%  |
| Total sector (weighted) | 41.60        | 39.52        | 5%      | 1.79%             | 0.16%           | 2.22%                   | 1.79%          | 4.00%            | 12316                        | 100% |

# Product/circuit cost

- » Cost of circuit:
  - » Cable cost ( $\text{CSA [mm}^2\text{]} \times l \text{ [m]} \times N$ ) an average discounted cable price of 0.09434 €/ ( $\text{mm}^2 \cdot \text{m}$ ).
  - » Connector cost
  - » Installation times per cable type
  - » Average hourly rate (23,7 euro/h)

| Cu based cables |                             |                                      |
|-----------------|-----------------------------|--------------------------------------|
| Section         | Installation time per meter | Installation time for the cable ends |
| mm <sup>2</sup> | Min                         | Min                                  |
| 1               | 1.75                        | 5                                    |
| 1.5             | 2.45                        | 7                                    |
| 2.5             | 3.15                        | 9                                    |
| 4               | 3.85                        | 12                                   |
| 6               | 5.25                        | 12                                   |
| 10              | 5.95                        | 15                                   |
| 16              | 7                           | 17                                   |
| 25              | 8.75                        | 20.4                                 |
| 35              | 9.8                         | 25.5                                 |
| 50              | 10.5                        | 30.6                                 |
| 70              | 11.9                        | 36                                   |
| 95              | 12.6                        | 45                                   |
| 120             | 14                          | 45                                   |
| 150             | 15.75                       | 60                                   |
| 185             | 17.5                        | 60                                   |
| 240             | 21                          | 85                                   |
| 300             | 24.5                        | 120                                  |
| 400             | 28                          | 200                                  |
| 500             | 35                          | 360                                  |
| 630             | 42                          | 480                                  |

| Minimum wire size | Maximum wire size | CSA             | Connector price | Discounted connector price |

|                   |                   | 630             | 92.82           | 57.54                      |

# *Copper long-term availability*

- » Many comments received:
- » Update needed, tekst added in 2.4.1 on 'purchase price' should fit in 2.4.1.1 'copper long term availability' (both will be integrated).
- » Main change: copper is not considered as critical raw material, references added to other EU studies that focus in this topic, e.g.:
  - » [http://ec.europa.eu/enterprise/policies/raw-materials/critical/index\\_en.htm](http://ec.europa.eu/enterprise/policies/raw-materials/critical/index_en.htm)

## Preparatory Studies for Product Group in the Ecodesign Working Plan 2012-2014: Lot 8-Power Cables

**Stakeholder meeting: Task 3**

**Paul Van Tichelen**

**Brussels, DG Enterprise**

**3<sup>rd</sup> of June 2014**

# Task 3 Users

- » **Systems aspects of the use phase for ErPs with direct impact**
  - » Definition of the User and context
  - » Loss parameters directly related to the cable itself
  - » Other functional cable parameters not directly related to losses
  - » Loss parameters directly related to the electrical circuit and network topology
  - » Parameters related to the building and loading
  - » Formulas used for power losses in cables
- » **End of Life behaviour**
- » **Local infrastructure (barriers & opportunities), e.g. cable bending**
- » **Recommendations**

# CSA, parameter

Table 3—2: Minimum and maximum cable cross-sectional areas per circuit type

| Sector      | Circuit application type | CSA (mm <sup>2</sup> ) min | CSA (mm <sup>2</sup> ) max |
|-------------|--------------------------|----------------------------|----------------------------|
| Residential | Distribution circuit     | 6                          | 16                         |
|             | Lighting circuit         | 1                          | 2.5                        |

# Formula 3.5 used for power losses in cables

$$E_{\text{circuit},(y)} [\text{kVAh}] = K_d \cdot R_t \cdot I_{\text{max}}^2 \cdot (\alpha_c \cdot K_f)^2 \cdot 8760 / 1000 \quad (\text{formula 3.5})$$

where,

- »  $K_d$  = the distribution factor
- »  $R_t$  = cable resistance at temperature  $t$  (see formula 3.2)
- »  $I_{\text{max}}$  = the maximum rated current of the cable
- »  $\alpha_c$  = The corrected load factor (circuit level-distributed)
- »  $K_f$  = Load form factor ( $=P_{\text{rms}}/P_{\text{avg}}$ )
- » PF = the power factor of the load served by the power cable

## Preparatory Studies for Product Group in the Ecodesign Working Plan 2012-2014: Lot 8-Power Cables

**Stakeholder meeting: Task 4**

**Dominic Ectors**

**Brussels, DG Enterprise**

**13 November 2014**

# Task 4: Technologies

- » BAT
  - » Product level (power cable)
  - » System level (electrical installation/-circuit)
- » BNAT
  - » Product level (power cable)
  - » System level (electrical installation/-circuit)
- » Production, distribution and End of Life (Task 3)
- » Improvement options & recommendations

# Task 4: Technologies - BNAT

- » BNAT at Product level (power cable)
  - » ?
- » BNAT at System level (electrical installation/-circuit)
  - » Energy efficiency at appliance level
  - » Building and home automation
  - » Peak reduction control systems
  - » DC power distribution in commercial buildings

# Task 4: Technologies - BNAT

- » DC power distribution in commercial buildings, as for instance promoted by the EMerge Alliance.
- » This system will use 380 VDC/24VDC instead of 110 or 230 VAC
- » The rationale is that cable insulation is related to the peak voltage( $V_{peak}$ ). In AC systems peak voltage is  $V_{rms} \cdot \sqrt{2} = 325 V_{peak}$ . In DC systems the peak voltage is equivalent to the VDC. As a consequence an identical cable with identical insulation would need **less current in DC** (e.g.: 325VDC, 1A, 325 VA) compared to AC (e.g. 230 Vrms, 1.41A, 325 W) and will therefore reduce the cable losses.
- » Such a switch from AC to DC is **complex** as it requires another concept of power distribution with different converters, protection switches, distribution transformers, etc. Therefore it will not be considered as a viable BAT improvement option.

# Task 4: Production, distribution and End of Live

- » Section on Power Cable Manufacturing added
- » Bill of Material Cu adapted
  - » Using 5(4) cores (or 4 x 1 core)
  - » Pricing based upon EURO/mm<sup>2</sup>.m
- » Bill of Material added for Al cable
- » Cable composition added (from stakeholder)

| Cable Part      | Composition                          | % in weight |
|-----------------|--------------------------------------|-------------|
| PVC sheath      | PVC resin                            | 45          |
|                 | Ca Carbonate filler                  | 25          |
|                 | Plasticizer (DIDP)                   | 25          |
|                 | Lubricant, stabilizer and others     | 5           |
| XLPE insulation | LDPE                                 | 97          |
|                 | Crosslinking compound (Silane based) | 3           |

# Task 4: Distribution

» Not changed

# Task 4: Improvement options & Recommendations

| Option Name                     | Description  |
|---------------------------------|--|
| At cable level                  |  |
| Low loss cable as a product     | No BNAT technologies are available at cable level that could reduce the energy losses in an economical feasible manner. Labelling information on the cable about energy losses is not an <b>improvement option</b> and can be implemented by the scenarios mentioned in "at circuit level" part.   |
| At circuit level (system level) |  |
| <u>S+x</u>                      | Using, for a particular circuit and load, a cable with a larger CSA ( <u>S+x</u> ) than necessary (according current standards and regulation) will result in a lower cable resistance R, and thus lower energy losses. The CSA increments are conform the current, standardized CSA values (no new CSA values are considered).  |
| 2S                              | By installing, for a particular circuit and load, instead of one cable with a particular <u>CSA<sub>x</sub></u> one or more cables in parallel with the same CSA (or even smaller CSA than the original foreseen <u>CSA<sub>x</sub></u> ) the losses in the circuit can be reduced.  |
| Topology                        | Keeping the topology in mind when designing the electrical system of a building can reduce the energy losses in the circuits.<br>For instance, to keep losses to a minimum, the main distribution transformers and switchboards are to be located to keep the distances (circuit lengths) to main loads to a minimum. The building's use, construction and space availability has to be taken into account to obtain the best position. One such method to determine the best position is the barycentre method <sup>9</sup> . |

## Preparatory Studies for Product Group in the Ecodesign Working Plan 2012-2014: Lot 8-Power Cables

**Stakeholder meeting: Task 5**

**Dominic Ectors**

**Brussels, DG Enterprise**

**13 November 2014**

# Task 5: aim

## » Task 5: Environment Economics

- » Base Case Environmental Impact Assessment(EcoReport Tool)
  - » Base Case Life Cycle Costs for consumer
  - » Base Case Life Cycle Costs for society
  - » EU wide impact
- 
- » to assess environmental and economic impacts of the different base cases.
  - » based upon EcoReport Tool version 3.06 , as provided with the MEErP 2011 methodology.

# Task 5 content (1)

- » 5.1 Product-specific inputs
  - » 5.1.1 Identification of base cases
  - » 5.1.2 Manufacturing of the product: Bill Of Materials
  - » 5.1.3 Distribution phase: volume of packaged product
  - » 5.1.4 Use phase
  - » 5.1.5 End of Life (EoL)
  - » 5.1.6 Life Cycle Cost Inputs
- » 5.2 Base case environmental impact assessment (using EcoReport)
- » 5.3 Base case Life Cycle Cost for consumer
- » 5.4 Base case Life Cycle Costs for society

# Task 5 content (2)

- » 5.5 EU totals

# 5.1 Product-specific inputs

## 5.1.1 Identification of base cases

- » Services sector
  - » Base case 1: typical distribution circuit
  - » Base case 2: typical lighting circuit
  - » Base case 3: typical socket-outlet
  - » Base case 4: typical dedicated circuit
- » Industry sector
  - » Base case 5: typical distribution circuit
  - » Base case 6: typical lighting circuit
  - » Base case 7: typical socket-outlet
  - » Base case 8: typical dedicated circuit
- » Industry sector
  - » Base case 9: The same base case as base case 8, but instead of copper the cable conductors are of aluminium.

## 5.1.2 Bill Of Materials: base cases

- » Conductor material: Cu or Al
- » Insulation material: 100% LDPE (3% silane based crosslinking compound in the XLPE insulation, however due to the limited list of materials in the EcoReport tool 100% LDPE is used for the calculations)
- » Sheath material, composed of:
  - » 50% of the sheath material weight: PVC (not recycled);
  - » 25% of the sheath material weight: talcum filler as filler material in the sheath (talcum filler in EcoReport tool instead of calcium carbonate)
  - » 25% of the sheath material weight: bitumen (As it is the closest to a plasticizer in the EcoReport tool);
- » Filler material: 100% talcum filler.

## 5.1.2 Bill Of Materials: base cases

**Table 5-3: Material resource input for base case 1**

| Pos<br>nr | MATERIALS Extraction & Production<br>Description of component | Weight<br>in g | Category<br>Click & select | Material or Process<br>select Categoryfirst ! |
|-----------|---|----------------|----------------------------|---|
| 1         | Conductor   | 600075.0       | 4- Non- ferro              | 30- Cuwire                                    |
| 2         | Insulation  | 26821.0        | 1- BlkPlastics             | 1- LDPE                                       |
| 3         | Sheath - PVC  | 26931.7        | 1- BlkPlastics             | 8- PVC  |
| 4         | Sheath - Filler   | 13465.8        | 2- TecPlastics             | 18- Talcum filler                             |
| 5         | Sheath - plasticizer  | 13465.8        | 7- Msc.                    | 56- Bitumen                                   |
| 6         | Filler material   | 146340.7       | 2- TecPlastics             | 18- Talcum filler                             |

## 5.1.3 Distribution phase: volume of packaged product

- » Not changed, except there are 9 bases cases

## 5.1.4 Use phase

| Parameter  | Unit                                  | T | Base cases           |                  |                       |                   |                      |                  |                       |                   |                   |

$$E_{\text{circuit}}(y) [\text{kVAh}] = K_d \cdot R_t \cdot I_{\text{circuit}}^2 \cdot (\alpha \cdot K_f)^2 \cdot 8760 / 1000 \quad (\text{formula 3.5})$$

$$E_{\text{active}}(y) [\text{kWh}] = \sqrt{3} \cdot V \cdot I_{\text{circuit}} \cdot \alpha \cdot K_f \cdot PF \cdot 8760 / 1000 \quad (1\text{-,}3\text{-phase}) \quad (\text{formula 3.6})$$

$$\text{Loss ratio} = E_{\text{circuit}}(y) / E_{\text{active}}(y) \quad (\text{formula 3.7})$$

## 5.1.5 End of Life (EoL)

- » Not changed compared to previous version
  - » Defaults values of the EcoReport have been used for recycling rates of the materials
  - » Only the re-use of metals is set to 0% instead of 1% and recycling of metals is set to 95% instead of 94% (see section 3.3 in Task 3)
- » Remark Europacable: do not agree on 5% waste/landfill

## 5.1.6 Life Cycle Cost Inputs

## 5.6 CROSS CHECKS

# Cross-checks: correction

- » the outcome for the losses were too high.
- » The bases cases as such, although abstract cases, are not representative for the average total stock and losses in Europe.
- » Therefore corrections factors. With the fitted parameters the total energy transported by the base cases equals the energy consumed at EU level, and the stock equals the stock figures in Task 3.
- » Three reference parameters are corrected:
  - » The reference circuit length (Task 3) is multiplied by 1.84;
  - » The reference load factor (Task 3) is multiplied by 0.5;
  - » The weight distribution towards the circuits (Task 2) is altered (see Table 5-20).

# Cross-checks: correction

- » Potentially a lot of circuits in the stock have a relative lower loading and/or longer circuit length and/or higher share of bases case with lower loading. This is also something taken into account in the sensitivity analysis (Task 6).

# Cross checks: fixed stock (sales, lifetime)

Table 5-23: EU-28 totals check: first method

## 6.5 Long term potential (BNAT) & systems analysis

- » 380 VDC systems replacing 230 VAC

# 6.6 Sensitivity analysis

- » **6.6.1 Sensitivity to circuit loading**
  - » the load factor;
  - » load form factor;
  - » Kd factor;
  - » number of nodes per circuit.
- » **6.6.2 Sensitivity to length of the circuits**
- » **6.6.3 Sensitivity to product lifetime**

## 6.6.1 Sensitivity to circuit loading

Table 6-32: design option sensitivity to circuit use (load)

|     | BAT - load sensitivity |     |      | LLCC - load sensitivity |     |      |
|-----|------------------------|-----|------|-------------------------|-----|------|
|     | low                    | ref | high | low                     | ref | high |
| BC1 | D3                     | D3  | D3   | BAU                     | D3  | D3   |
| BC2 | D1                     | D3  | D3   | BAU                     | BAU | D1   |
| BC3 | BAU                    | D2  | D3   | BAU                     | BAU | BAU  |
| BC4 | D3                     | D3  | D3   | D1                      | D3  | D3   |
| BC5 | D3                     | D3  | D3   | BAU                     | D1  | D4   |
| BC6 | D2                     | D3  | D3   | BAU                     | D1  | D1   |
| BC7 | BAU                    | D3  | D3   | BAU                     | D1  | D1   |
| BC8 | D3                     | D3  | D3   | D1                      | D3  | D3   |
| BC9 | D3                     | D3  | D3   | D1                      | D3  | D3   |

## Greenhouse warming potential GWP related to life cycle phase

## Greenhouse warming potential GWP related to life cycle phase

Figure 6-23 Greenhouse Gases (in detail, relative of each phase to total) in GWP100 for the 'high values'

## 6.6.2 Sensitivity to length of the circuits

Table 6-42: design option sensitivity to circuit length

|     | BAT - length sensitivity |     |      | LLCC - length sensitivity |     |      |
|-----|--------------------------|-----|------|---------------------------|-----|------|
|     | low                      | ref | high | low                       | ref | high |
| BC1 | D3                       | D3  | D3   | D3                        | D3  | D3   |
| BC2 | D3                       | D3  | D3   | BAU                       | BAU | BAU  |
| BC3 | D2                       | D2  | D2   | BAU                       | BAU | BAU  |
| BC4 | D3                       | D3  | D3   | D3                        | D3  | D3   |
| BC5 | D3                       | D3  | D3   | D1                        | D1  | D1   |
| BC6 | D3                       | D3  | D3   | BAU                       | D1  | D1   |
| BC7 | D3                       | D3  | D3   | BAU                       | D1  | D1   |
| BC8 | D3                       | D3  | D3   | D3                        | D3  | D3   |
| BC9 | D3                       | D3  | D3   | D3                        | D3  | D3   |

## 6.6.3 Sensitivity to product lifetime

Table 6-43: Life time parameters per sector

| Sector             | short product life    |              | Reference             |              | long product life     |              |
|--------------------|-----------------------|--------------|-----------------------|--------------|-----------------------|--------------|
|                    | Replace-<br>ment rate | Product life | Replace-<br>ment rate | Product life | Replace-<br>ment rate | Product life |
| Unit               | %                     | year         | %                     | year         | %                     | year         |
| Residential sector | 2.10%                 | 40           | 1.18%                 | 64           | 0.80%                 | 84           |
| Services sector    | 7.08%                 | 13           | 3.20%                 | 25           | 1.70%                 | 40           |
| Industry sector    | 7.08%                 | 12           | 2.80%                 | 25           | 1.37%                 | 40           |

## 6.6.3 Sensitivity to product lifetime

Table 6-53: Design option sensitivity to product lifetime

|     | BAT - lifetime sensitivity |     |      | LLCC - lifetime sensitivity |     |      |
|-----|----------------------------|-----|------|-----------------------------|-----|------|
|     | low                        | ref | high | low                         | ref | high |
| BC1 | D3                         | D3  | D3   | D1                          | D3  | D3   |
| BC2 | D3                         | D3  | D3   | BAU                         | BAU | D1   |
| BC3 | D1                         | D2  | D3   | BAU                         | BAU | BAU  |
| BC4 | D3                         | D3  | D3   | D3                          | D3  | D3   |
| BC5 | D3                         | D3  | D3   | BAU                         | D1  | D4   |
| BC6 | D3                         | D3  | D3   | BAU                         | D1  | D1   |
| BC7 | D3                         | D3  | D3   | BAU                         | D1  | D1   |
| BC8 | D3                         | D3  | D3   | D3                          | D3  | D3   |
| BC9 | D3                         | D3  | D3   | D3                          | D3  | D3   |

14/11/2014

## Preparatory Studies for Product Group in the Ecodesign Working Plan 2012-2014: Lot 8-Power Cables

**Stakeholder meeting: Task 7 - scenarios**

**Paul Van Tichelen - Dominic Ectors**

**Brussels, DG Enterprise**

**13 November 2014**

# Task 7 structure

- » **Stakeholders position – to be provided**
- » Policy options
- » Scenarios
- » Socio-economic Impact
- » Sensitivity analysis

# Policy options- at product level?

- » generic ecodesign requirements on information? (increase awareness
  - » E.g. maximum DC ohmic resistance per kilometer at 20°C
  - » E.g. on websites and/or packages:
    - » Cable losses per kilometer @ 50, 100 % load
    - » Tracking data of real measured ohmic resistance? (quality control data)
- » Scope:
  - » IEC 60502-1: Power cables with extruded insulation and their accessories for rated voltages from 1kV up to 30 kV. Remark: restricted to cables with a rated voltage  $U_0/U$  ( $U_m$ ) of 0.6/1 (1.2kV)
  - » EN 50525-1 Electric cables: LV energy cables of rated voltages up to and including 450/750 ( $U_0/u$ ) Remark: restricted to EN50525 cables for fixed wiring

# Policy option at product level and/or circuit level

- » Are electrical circuits in building products?
  - » No? > elements or components of a building and so far were not considered as 'products' in European legislation
  - » not satisfy the minimum volume of sales requirement of article 15 (5) of the ErP regulation (2009/125/EC
  - » cannot be moved or relocated and the 'free movement of goods' is therefore irrelevant
  - » Currently don't belong to the product categories of the CE product marking directive (93/68/EEC).
- » Therefore other policy proposals are included

# Policy options at circuit/installation level - scope

## » Scope

- » “installed Low Voltage power cables in buildings after the meter”
  - » Suggest to focus, e.g.:
    - » circuits between the transformer(s) and the main distribution board of the building, after the meter;
    - » Electric circuits between the main distribution board and the secondary distribution boards;
    - » Dedicated electric circuits from the main and secondary distribution boards to electrical consumers with a high load factor (large number of operating hours per year) (e.g. HVAC components and servers).

# Policy options – **Specific** requirements to increase CSA

- » Require LCC (economic optimisation)
  - » IEC 60287-3-2 Electric cables – Calculation of the current – part 3-2: sections on operating conditions – Economic optimization of power cable size?
  - » Web tool or software tool?
  - » Introduction of an extra correction factor based on the load factor of the electric consumer. **HD 60364-5-52:2011 (IEC 60364-5-52:2009)** defines two correction factors to determine the maximum allowable current-carrying capacity of an electric circuit (apart from method of installation & ambient temperature)?
  - » **Inclusion in the EPB Directive (2010/31/EU)?**
    - » **updated prIEC 60364-8-1 (EE in electrical installations), updated EN15603, and a new standard EN15XXX?**

# Policy options – **Generic** requirements to increase CSA

- » Before installation:
  - » Information: ref., the design current ( $I_b$ ), rated current of the circuit ( $I_n$ ), L, estimated load factor, Kf or equivalent hours of peak load?
  - » Note: updated prIEC 60364-8-1? Align with IEC 60287-3-2 on economic optimization method?
- » After installation:
  - » Measure & indicate resistance
  - » Add label with parameters
  - » Note: updated prIEC 60364-8-1?
- » In BACS (Building Automation and Control Systems)
  - » the load factor (LF) and load form factor (Kf) and/or equivalent or equivalent time of peak load
  - » include monitoring functions in standard EN 15232 (2007)?

## 7.2 .1 Scenario definition

| Scenario | BC1 | BC2 | BC3 | BC4 | BC5 | BC6 | BC7 | BC8 |
|----------|-----|-----|-----|-----|-----|-----|-----|-----|
| BAU      | BAU | BAU | BAU | BAU | BAU | BAU | BAU | BAU |
| BAT      | D3  | D3  | D2  | D3  | D3  | D3  | D3  | D3  |
| LLCC     | D3  | BAU | BAU | D3  | D1  | D1  | D1  | D3  |
| IV       | D1  | BAU | BAU | D1  | D1  | BAU | BAU | D1  |

- » Circuits are not products !!!
- » Scenarios **not** based upon ecodesign measures !!!!!
- » Gives an indication if **all** circuits in services and industry are considered
- » 'Improved' circuits replace BAU circuits at replacement rate (product life)
- » Correction factors in T5 are used! Meaning low load, long circuits.

## 7.2.2.1 Main input parameters for the analysis

|  |      |
|--|------|
| Discount rate                            | 4.0% |
| Inflation rate                           | 2.0% |
| Energy Escalation rate                   | 4.0% |
| Electricity rate (€/kWh)                 | 0.11 |
| Stock growth rate services sector        | 1.9% |
| Stock growth rate industry sector        | 2.9% |
| Sales growth rate services sector        | 3.2% |
| Sales growth rate industry sector        | 2.8% |
| Product lifetime services sector (years) | 25   |
| Product lifetime industry sector (years) | 25   |

*Table 7-5: Main input parameters*

## 7.2.2.2 Stock

Total stock of circuits

Figure 7-1: Total stock of circuits (in circuit units)

Total stock of circuits

Figure 7-2: Total stock of circuits (in Kton conductor material)

# Eurostat EU electricity consumption

Table 2-12 EU28 annual final consumption of electricity by industry and households/services in TWh<sup>16</sup>

|            | Final annual energy consumption in TWh |      |      |      |      |      |      |      |      |      |      |      |
|------------|--|------|------|------|------|------|------|------|------|------|------|------|
| Year       | 2001                                   | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 |
| Industry   | 1075                                   | 1081 | 1089 | 1120 | 1133 | 1131 | 1142 | 1119 | 966  | 1030 | 1037 | 1008 |
| Households | 744                                    | 753  | 787  | 798  | 806  | 818  | 810  | 820  | 820  | 845  | 803  | 828  |
| Services   | 703                                    | 716  | 741  | 763  | 780  | 822  | 837  | 864  | 867  | 904  | 885  | 898  |

-0,74% annual growth rate in the industry

+2,0 up to +2,5% annual growth rate in services

» In this model is:

electricity consumption growth = stock growth

=> Stock growth for industry: 0% ??

## 7.2.2.3 Annual sales of circuits

Figure 7-8: Annual sales of circuits (in Kton conductor material)

## 7.2.2.4 Annual demand of electricity due to losses in circuits

|                            | 1990  | 1995  | 2000  | 2005  | 2010  | 2015  | 2020   | 2025   | 2030   | 2035   | 2040   | 2045   | 2050   |

# 7.3 Socio-economic impact analysis

## 7.3.1 Annual expenditure

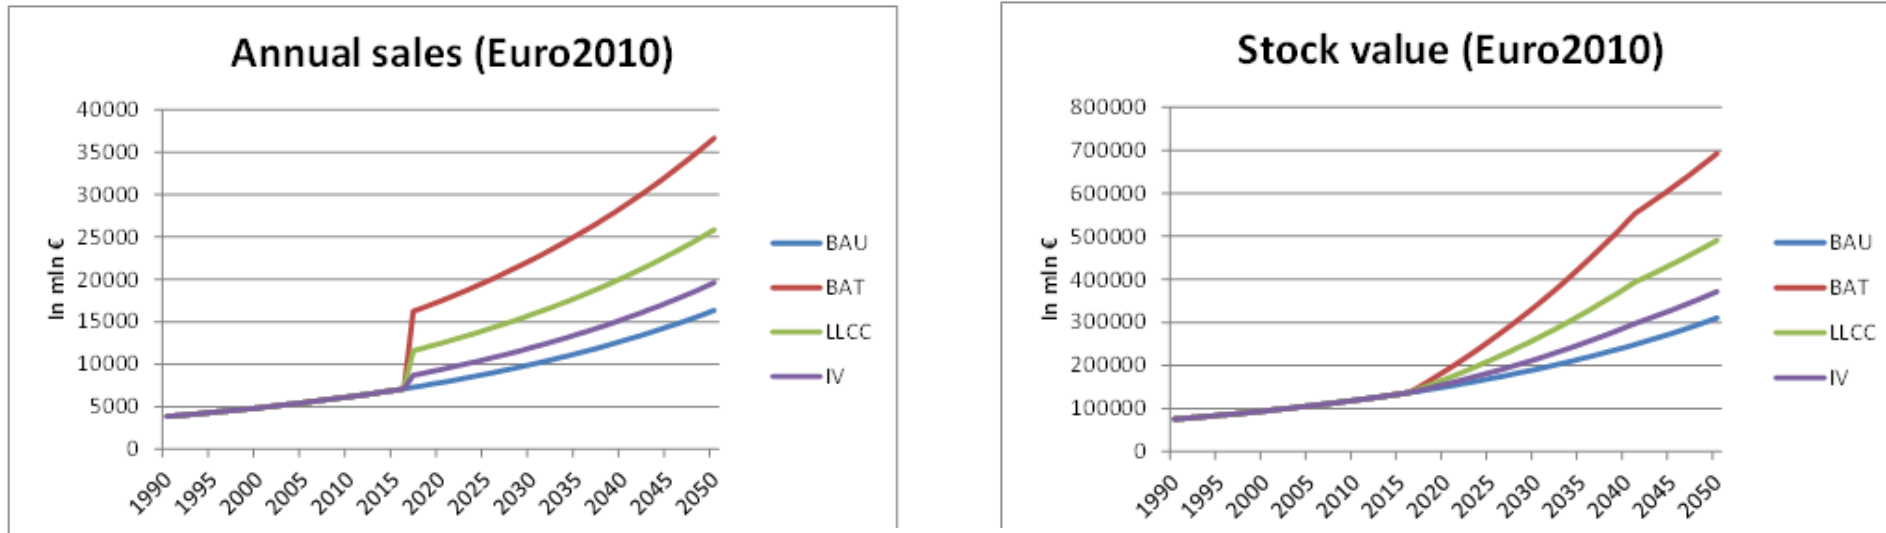

Figure 7-17: Annual sales (in mln. euro)

Stock value (in mln. euro)

Figure 7-19: Annual expenditure due to electricity losses (in mln. euro)

## 7.3.2 Impact on workforce

- » can lead to significant job creation within EU28 in the sector of local electrical contracting, local engineering.
- » Stakeholders: please provide input and figures if possible

## 7.3.3 Any other relevant impact ?

- » Impact on the market structure, size of the companies, role and responsibility ...

# 7.4 Sensitivity analysis
